

# Sunlit Basements

Submitted by [Gosik](#)

For this tutorial to work your game needs to be patched to at least version 1.5/1.6.

## Intro

This tutorial will show you how to place a basement next to the swimming pool and how to place windows in the basement walls.

## Step 1

Choose the basement tool and create a basement.

## Step 2.1

Choose the swimming pool tool and place pool next to the basement. You won't be able to place pool right next to it, so just leave one box without anything.

## Step 2.2

On the basement level it will look this way.

## Step 3.1

Depending on which EP (patch) you have installed, this step will vary.

If you have Late Night (or your game is fully patched) select swimming pool tool and while holding “Ctrl” drag the tool on the empty area between the basement and the pool.

If you do NOT have Late Night and your game is NOT fully patched you will have to use basement tool instead of swimming pool tool. So select basement pool tool and while holding “Ctrl” drag the tool on the empty area between the basement and the pool

Now the pool wall or basement wall (depending on which EP/patch you have installed) should disappear.

## Step 4.1

As the wall is gone it will be possible to add swimming pool (if you have Late Night or if your game is fully patched) or basement (if you do NOT have Late Night and your game is NOT fully patched) between the main basement, that you have created earlier and the swimming pool.

## Step 4.2

On the basement level it will look this way:

## Step 5

Again this step will vary depending on which EP (patch) you have installed.

If you have Late Night you do not need to do any tricks to place a window on the wall between the basement and the pool.

Just select a window that you want to use and place it in the wall.

If you do NOT have Late Night and your game is not fully patched you will have to use “moveobjects on” cheat. Open the cheat line by clicking “Ctrl” + “Shift” + “c”, type it in and press “Enter”, then select a window and place it in the wall.

## Step 6

Build the rest of the house... and let your sims enjoy the sunlight.
